

Automating a Review Workflow (STUB)

Placeholder — replace with a real walkthrough of automating a review workflow in Ozwala.

development · 2026-11-08

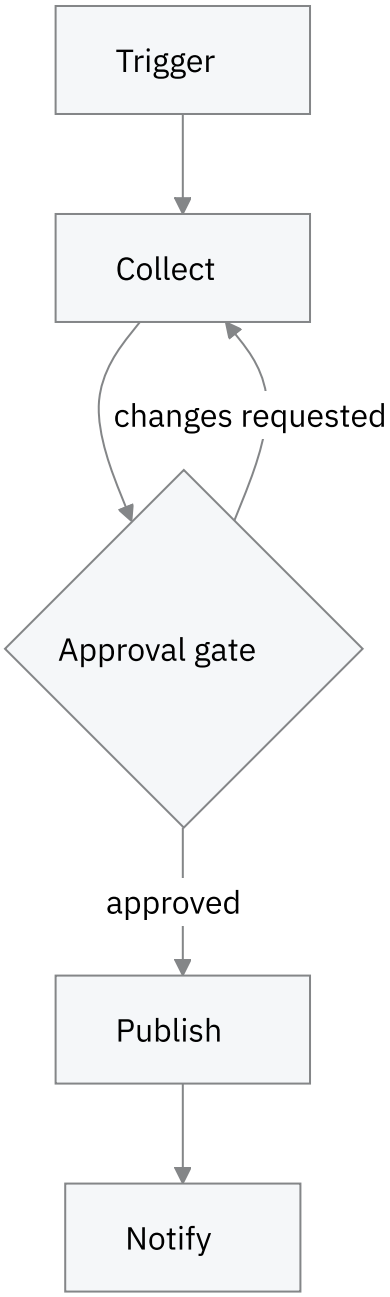
Automating a Review Workflow

STUB — TO BE REPLACED. This is placeholder content for the ozwala documentation site.

This page will eventually describe how to chain Ozwala steps together into a repeatable review workflow, including triggers, approval gates, and notifications.

The shape of a review workflow

The stages below are the ones every review workflow has, whatever it is reviewing. This diagram is also what keeps the build's mermaid pre-pass honest: it is rendered to vector on every build, so a pipeline that has stopped converting diagrams fails here rather than silently shipping a page of preformatted text.



What belongs here (eventually)

- Defining the stages of a review workflow.
- Wiring up triggers and approval gates.
- Notification and escalation options.
- A worked example end to end.
