

Projects and bookmarks

Open a project's documents, and keep the web pages you use at hand.

Projects and bookmarks

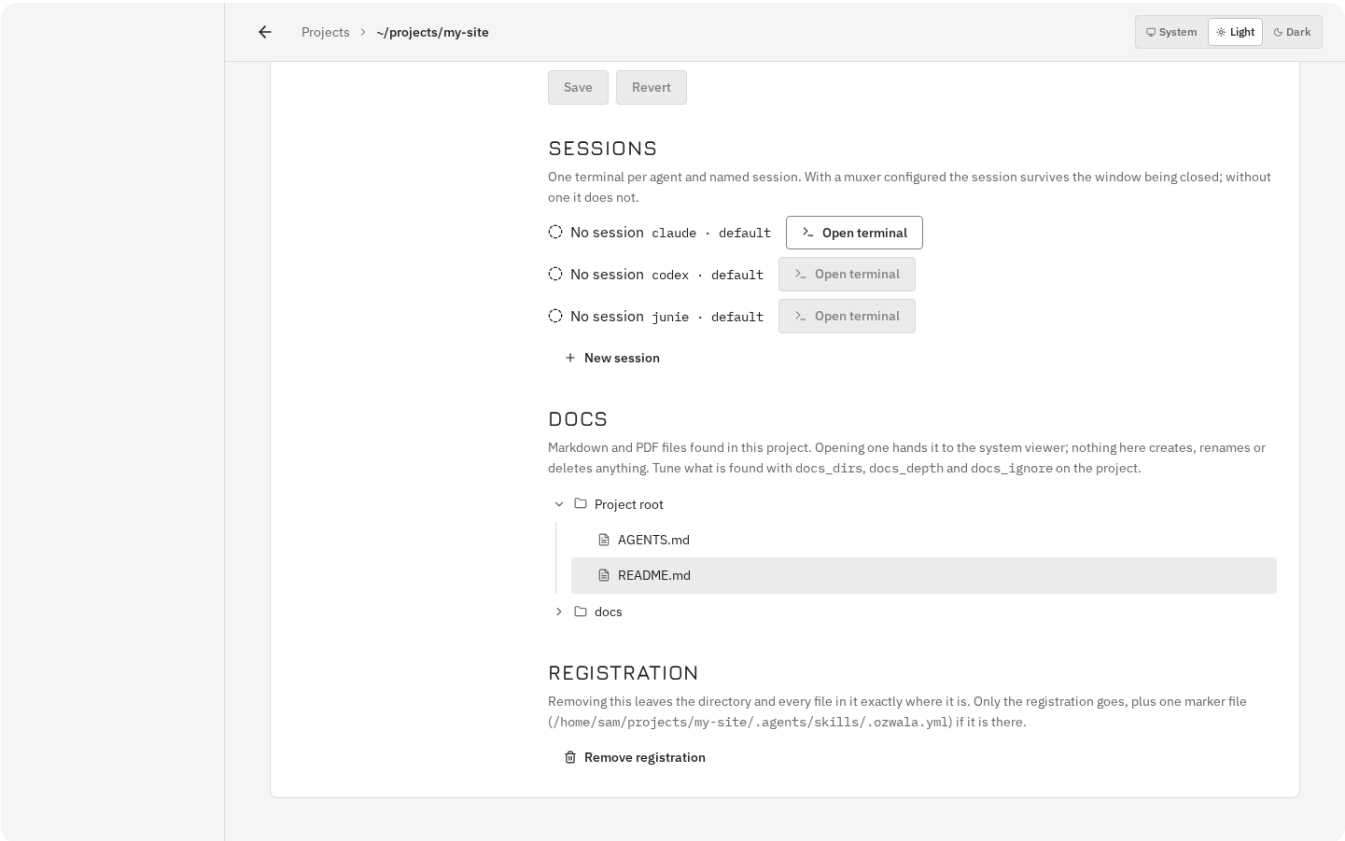
A project is a folder you work in with your agents: Get started finds those with an `AGENTS.md` or `CLAUDE.md`, and **Projects** > **New project** adds any other. Bookmarks are the web pages you want at hand, for every project or for one.

Each task below names the command that does the same from a terminal. `ozwala` is the desktop app's own command; the command-line download is called `ozwalina`, and takes the same commands.

Open a project's documents

1. Open **Projects** and choose the project.
2. Under **Docs**, open a folder and choose a Markdown or PDF file.

It opens in your usual viewer. The Docs list only reads: nothing there creates, renames or deletes a file. The **Dashboard** shows the documents of every project in one list.

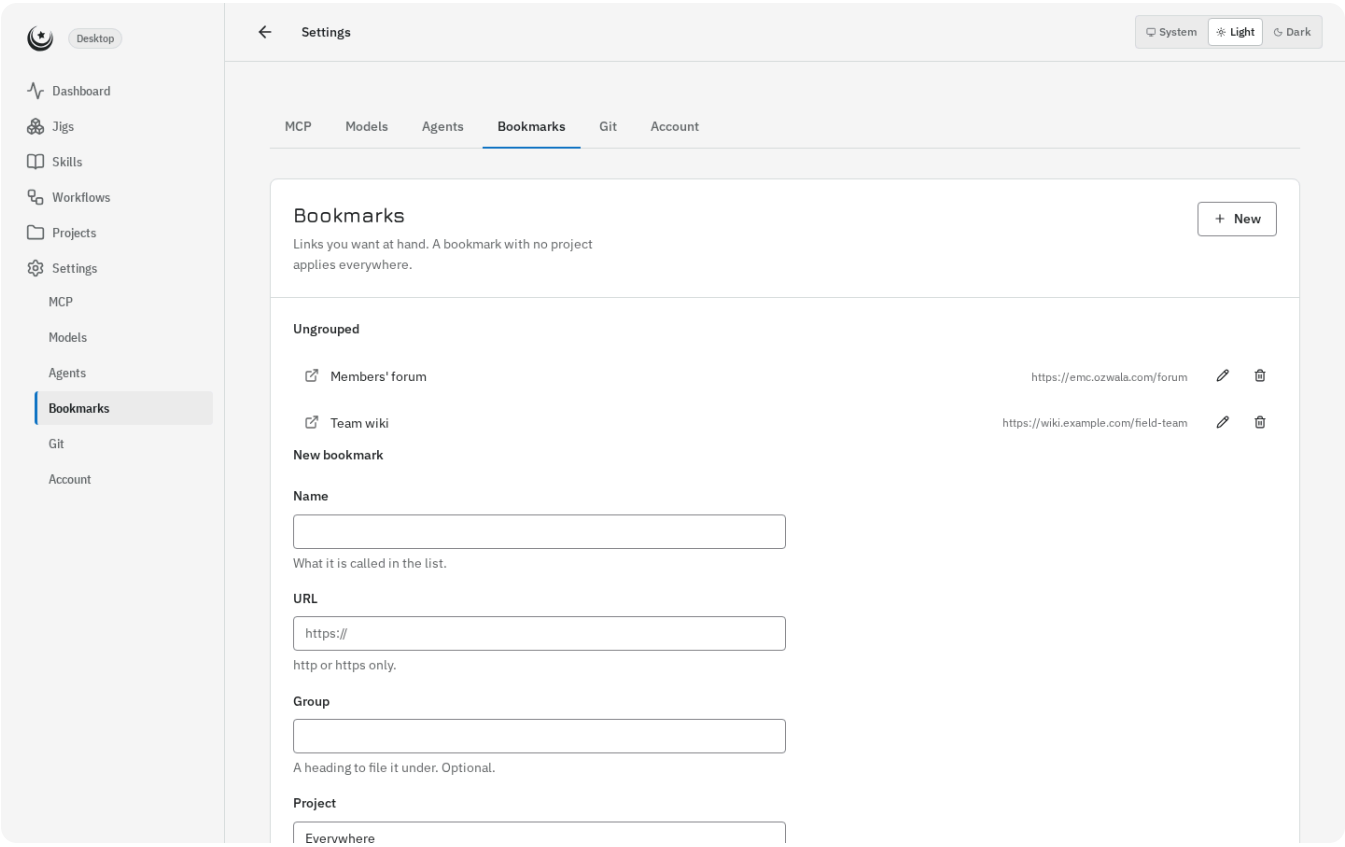


From the command line: `ozwala project list` names the projects and their folders.

Keep a bookmark

1. Open **Settings** > **Bookmarks** and choose **New**.
2. Give it a name and a web address. A group files it under a heading; a project shows it with that project only.
3. **Save**.

A bookmark opens in your web browser, from the **Dashboard** or from **Settings** > **Bookmarks**. Only `http` and `https` addresses are kept: anything else, such as a `file:` address, is refused and says why, because opening it would run whatever the computer opens such files with.



From the command line: `ozwala bookmark add <name> <url>`, `ozwala bookmark list` and `ozwala bookmark open <name>`.

More about Ozwala at ozwala.com (https://ozwala.com).
